PROJECTS

[SmartEd](#) HTML, CSS, Figma

A web app that was designed for my college where students could access their course material curated specifically by their own professors. Basically, a one stop solution to learning curve of a university student, by containing video lectures of the professors at same university for the students in case the student has missed lectures or has gone on leave, it would help him/her to cover his/her study loss at cost of nothing.

[GNDEC-Scan](#) HTML, CSS

The Handwriting to Text Converter is a Python-based project that allows you to scan handwritten documents and convert them into machine-readable text. This tool is designed to simplify the process of digitizing handwritten notes, documents, or any other handwritten content.
